

➤ Wireless Wind Meter

- One of the big challenges at an athletics competition is all the cabling.

We have a wireless solution for the wind meter to ease and also to make the information transfer more secure. With help of its specific radio chip designed for the industry, our wireless solutions creates a stable connection even over long distances.

The wind meter is without any moveable parts as it uses ultrasound sensors for the measure of the exact value of the wind speed which gives a higher precision, it has longer life span and is also IAAF approved.

The battery of the wind meter lasts for a competition over several days and is to be charged with the included charger in between competitions.

Option: Storage box for simpler and safe storage as well as transport between the arenas. The box is both water and shockproof.

Wind meter on tripod with wireless transmitter

Technical Specification Windmeter

Operation voltage	12V	Radio Frequency	2.4GHz
Battery	12V 6.5Ah	Wireless Range	>200 M
Battery Charger	230V 50Hz
